

Zero-Downtime Linux Updates

Atomic OS updates. No interruptions. Built in Rust.

🏢 **The Problem:** Industrial edge ipc fleets can't afford production stops for routine OS updates.

📦 **The Solution:** container-based atomic OS swipe via `bootc` with automatic fallback on failure.

🛡️ **Secure by design:** End-to-end security with TPM identity, Ed25519 signatures and a 100% Rust Codebase.

▶️ **Live Demo:** Visit us to watch an OS update roll out to an edge device with zero downtime!
